

ZERO PHOSPHORUS WATERSHED PROTECTION FERTILIZER 20-0-10

Phosphorus is an essential nutrient for plant growth. However, too much can have a devastating impact on lakes and streams. Increased amounts of phosphorus entering waterways can stimulate algae blooms and plant growth. As these plants die and decompose they reduce the amount of oxygen available to fish and other aquatic life.

This fertilizer is specially designed to reduce phosphorus application on established lawns. This formulation will provide sustained color and hardness while eliminating the potential negative effects that excess phosphorus has on water quality. Follow the application instructions as indicated by your Cornell soil nutrient analysis.

GUARANTEED ANALYSIS	
Total Nitrogen (N)	20%
Available Phosphoric Acid (P₂O₅)	0%
Soluble Potash (K₂O)	10%

Watershed Protection Fertilizer, or Zero phosphorus fertilizer, is now available through the Cayuga County Soil and Water Conservation District and is sold in 40 lb. bags (for \$8). The Cayuga County Soil and Water Conservation District is located at 7413 County House Road in Auburn (next to County Jail and can be contacted at 315-252-4171 ext. 3).
